

Amendments to the Claims

Prior to examination, please cancel claim 1.

Please add claims 2-16.

1. (canceled)
2. (new) A method of awarding a bonus to a gaming machine on a network of gaming machines comprising:
 - encrypting a message on the network;
 - transmitting the message to one of the gaming machines;
 - decrypting the message at the gaming machine; and
 - paying a bonus at the gaming machine responsive to the message.
3. (new) The method of claim 2 wherein the encrypting the message and decrypting the message is accomplished with a private key pair.
4. (new) The method of claim 2 wherein encrypting the message comprises signing the message.
5. (new) The method of claim 2 wherein encrypting the message comprises verifying the message.
6. (new) The method of claim 2 wherein encrypting the message comprises both signing and verifying the message.
7. (new) The method of claim 3 wherein said method further comprises periodically changing the private key pair.
8. (new) The method of claim 7 wherein said method further comprises identifying the key pair that encrypted the message.
9. (new) The method of claim 8 wherein identifying the key pair comprises associating a session number with each key pair.
10. (new) A method for encrypting communications on a network of gaming machines comprising:

- establishing a first key at a first node associated with a gaming machine;
 - establishing a second key at a second node on the network remote from the gaming machine;
 - encrypting a message at one of the nodes;
 - transmitting the message to the other node; and
 - decrypting the message at the second node.
11. (new) The method of claim 10 wherein the message originates at the first node and includes data indicating an amount played at the gaming machine.
 12. (new) The method of claim 11 wherein said second node is associated with a network computer that receives messages from multiple gaming machines on the network, said messages each including data indicating an amount played on one of the gaming machines.
 13. (new) The method of claim 10 wherein the encrypting the message and decrypting the message is accomplished with a private key pair.
 14. (new) The method of claim 10 wherein encrypting the message comprises signing the message.
 15. (new) The method of claim 10 wherein encrypting the message comprises verifying the message.
 16. (new) The method of claim 10 wherein encrypting the message comprises both signing and verifying the message.
 17. (new) The method of claim 13 wherein said method further comprises periodically changing the private key pair.
 18. (new) The method of claim 17 wherein said method further comprises identifying the key pair that encrypted the message.
 19. (new) The method of claim 18 wherein identifying the key pair comprises associating a session number with each key pair.

20. (new) The method of claim 10 wherein the message originates at the second node and includes data indicating a bonus payable at the gaming machine.
21. (new) A network of gaming machines comprising:
- a first node associated with a gaming machine on the network;
 - a second node located on the network remote from the first node;
 - a key pair, one key being associated with the first node and the other key being associated with the second node; and
 - a process operable at each node to encrypt messages between the nodes using the key pair.
22. (new) The network of claim 21 wherein said key pair comprises a private key pair.
23. (new) The network of claim 22 wherein said key pairs are periodically changed and wherein said network further comprises a process operable to identify each key pair.
